## FDV <br> BA-lighting

BA508-AL45-30W-SS

## Introduction

With high performance(Non-dimmable, Emergency, Sensor, Sensor+Emergency ). Easy to install: labor-saver( quick terminal block design), Connect in series(Opening wiring and concealed wiring are optional). IP65, IK10. Easier maintenance, as the driver can be replaced easily, different standard drivers in the market can be matched.

- Up to $70 \%$ energy saving compared to standard CFL
- Long lifetime of 50,000 hours
- $120^{\circ}$ wide beam angle
- CCT: 3000K 4000K 5000K 5700K
- No UV/IR light
- Environment friendly, without Mercury or any other hazardous substances

## Application notes

- IP65 both for indoor and outdoor use
- Professional electrician for installation only
- Switch off before installation
- Do not touch when in use
- Keep away from hot steam and corrosive gas

## Application Areas

It is designed for general lighting applications in office, supermarket, shop, school, hotel, etc. It is also widely used for public areas, such as stairway, lobby, reception, corridors etc.

| Installation sit | indoors, ceiling mounting |
| Working temperature | $-15^{\circ} \mathrm{C} \sim+70^{\circ} \mathrm{C}$ |
| Power consumption | approx. 0.5 W |

## Detection range setting (sensitivity)

SENS:S1, S2

| S1 | S2 | detection range |
| :---: | :---: | :---: |
| 0 | 0 | 2 m |
| 0 | 1 | 5 m |
| 1 | 0 | 8 m |
| 1 | 1 | 10 m |

Detection range is the term used to describe the radii of the more or less circular detection zone produced on the ground after mounting the sensor loght at a height of 2.5 m , pull switch to the ON position as "1", pull switch to the OFF position as "0", switch location and detection range of the corresponding table is as follows:

Note: the above detection range is gained if the detected person is between $1.6 \mathrm{~m} \sim 1.7 \mathrm{~m}$ tall with middle figure and moves at a speed of $1.0 \sim 1.5 \mathrm{~m} /$ sec. if person's stature, figure and moving speed change, the detection distance will also change.
ATTENTION: When use thes product, please adjust the sensitivity to an appropriate position you need, please do not adjust the sensitivity to maximum, in case the product works abnormally because of wrong motion detection, including blowing leaves \& curtains small animals, or even power grid \& electrical equipment. All the above factors can lead to abnormal work. When the product does not work normally, please try to lower the sensitivity apropriately, and then test it.

## Time setting

| S3 | S4 | S5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The light can be set to stay ON for any period of time between approx. 10sec and a maximum of 30 min . Any movement detected before this time elapse will re-start the timer. It is recommended to select the shortest time for adjusting the detection zone and for performing the walk test.
Pull switch to the ON position as "1", pull switch to the OFF position as "0", switch location and detection range of the corresponding table is as follows:

NOTE: after the light switches OFF, it takes approx. 4sec before it is able to start detecting movement again. The light will only switch on in response to movement once this period has elapsed.

## Light-control setting

LUX:S6, S7, S8

| S6 | S7 | S8 | LUX |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | Disable |
| 0 | 0 | 1 | 10LUX |
| 0 | 1 | 0 | 20LUX |
| 0 | 1 | 1 | 50LUX |
| 1 | 0 | 0 | 100LUX |
| 1 | 0 | 1 | 200LUX |
| 1 | 1 | 0 | 300LUX |
| 1 | 1 | 1 | 500LUX |

The chosen light response threshold can be infinlitely from approx. 10-500lux, pull switch to the ON position as "1", pull switch to the OFF position as " 0 ", switch location and lightcontrol of the corresponding table is as follows:

## Driver lifetime \& LED light decay rate

## Temperature

- The testing is operated at $25^{\circ} \mathrm{C}$
- The lifetime of capacitor, minimum of 5,000 hours if operated at $105^{\circ} \mathrm{C}$, will be doubled whenever the temperature drops $10^{\circ} \mathrm{C}$
- The highest withstand temperature of IC, MOS could be $120^{\circ} \mathrm{C}$
- The highest withstand temperature of LED junction temperature is $150^{\circ} \mathrm{C}$

The driver lifespan is based on capacitor working temperature.
